Initial Model Training Code, Model Validation and Evaluation Report

The initial model training code will be showcased in the future through a screenshot. The model validation and evaluation report will include classification reports, accuracy, and confusion matrices for multiple models, presented through respective screenshots.

Initial Model Training Code

```
[ ]  def model_evaluation(classifier):
        cm = confusion_matrix(y_test, classifier.predict(x_test))
        counts = [value for value in cm.flatten()]
        labels = [f'{v1}' for v1 in counts]
        labels = np.asarray(labels).reshape(2,2)
        sns.heatmap(cm, annot = labels, cmap = 'Greens', fmt = '')
        y_pred = classifier.predict(x_test)
        yt_pred = classifier.predict(x_train)
        print('The Training Accuracy of the algorithm is', accuracy_score(y_train, yt_pred))
        print('The Testing Accuracy of the algorithm is', accuracy_score(y_test, y_pred))
        return [(accuracy_score(y_train * 100, yt_pred * 100) * 100), (accuracy_score(y_test * 100, y_pred * 100) * 100),precision_score(y_test,y_pred,average='macro')]
